

# Construction and demolition waste (C&D Waste) – From problem to resource

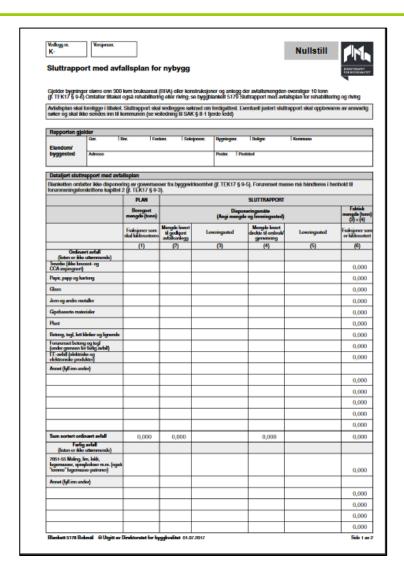

- 1. C&D Waste from problem to resource
- 2. Waste Management Plan Why and How?
- 3. Survey of hazardous materials and components
- 4. Environmental remediation
- 5. Organisation and sorting on site
- 6. Downstream solutions

## Waste management plan – Why and How?

#### We will discuss:

- ✓ What is a waste plan?
- ✓ Why create waste plans?
- ✓ Requirements for content in a waste plan
- ✓ How to complete a waste plan
- ✓ Calculation of waste fraction quantities
- ✓ Final reporting documentation and reporting
- ✓ Future changes to the waste plan

## What is a waste management plan?

- ✓ A plan that shows how the different types of waste will be treated.
- ✓ An overview of expected amounts of different waste fractions that will be generated in the project, such as plaster, cardboard, plastic, concrete etc. (TEK 17 § 9-6).
- ✓ In the case of demolition and rehabilitation, an environmental survey report must also be completed for the handling of substances hazardous to health and the environment (TEK 17 § 9-7).
- ✓ When demolishing and rehabilitating an existing block of flats and commercial buildings where a waste plan is required, a reuse report must also be completed. (TEK 17 § 9-7).

## Waste plans – Why?

- ✓ The waste plans shall promote environmentally and socially sound handling of waste and prevent illegal disposal of such waste.
- ✓ Uniform framework conditions for all contractors and project-holders (builders).
- Promote increased recycling.
- ✓ Reduce waste generation.
- Ensure that hazardous waste in existing buildings and structures is mapped and handled properly.
- ✓ Prevent the spread of substances hazardous to health and the environment.

#### When is a waste plan required?

When the requirement applies (TEK 17 § 9-6):

- ✓ construction of s over 300 m2
- √ demolition of buildings over 100 m2
- ✓ rebuilding/rehabilitation of an area over 100 m2
- ✓ construction, extension, sub-construction, alteration or demolition of buildings, constructions and facilities if the project generates more than 10 tonnes of C & D waste.
- ✓ requirement that at least 70% of the waste must be sorted into clean waste types, and all waste must be delivered to approved waste reception, re-use or directly for recycling. (TEK 17 § 9-8).).

# Requirements for waste management plans

- ✓ The waste plan must be completed and be presented at an inspection (SAK 10 § 5-5 and TEK 17 § 9-6 and § 9-7).
- ✓ Final reporting to the municipality comprising sorted quantities of waste fractions and their disposal (TEK 17 § 9-9).
- ✓ Delivery of all waste fractions to approved waste reception; re-use or recycling, must be documented.
- ✓ The project owner (builder) and responsible building contractor are responsible for compliance with Chapter 9 of TEK 17 (SAK 10 § 12-1).

#### Hvor finnes skjemaene?

- ✓ www.dibk.no (The Norwegian Building Authority).
- √ http://byggeregler.dibk.no/blanketter.
- ✓ Form 5178 final report with waste plan for new buildings.
- ✓ Form 5179 final with waste plan for rehabilitation and demolition.
- ✓ New, digital platforms for building searches, including waste plans, are in progress.

#### New projects

- ✓ Page 1: ordinary waste and hazardous waste.
- ✓ There will always be fractions of hazardous waste and EE waste (e.g. glue cartridges, spray cans or cable stubs).
- ✓ Use empirical data
- ✓ Blank fields: fill in any other relevant fractions.

Detaliert sluttrapport med avfallsplan

#### Sluttrapport med avfallsplan for nybygg

Gjelder bygninger større enn 300 kvm bruksareal (BRA) eller konstruksjoner og anlegg der avfallsmengden overstiger 10 tonn (jf. TEK10 § 9-5) Omfatter tiltaket også rehabilitering eller riving; se byggblankett 5179 Sluttrapport med avfallsplan for rehabilitering og riving

Avfallsplan skal foreligge i tiltaket. Sluttrapport skal vedlegges søknad om ferdigattest. Eventuell justert sluttrapport skal oppbevares av ansv søker og skal ikke sendes inn til kommunen (se veiledning til SAK § 8-1 fjerde ledd)

Detaijert sluttrapport med avfallsplan

#### Sluttrapport med avfallsplan for rehabilitering og riving

Gjelder seknadspliktig tiltak som berører del av bygning som overskrider 100 m² berørt bruksareal (BRA), eller konstruksjoner og anlegg der avfallsmengden overstiger 10 tonn (f. TEK10 § 9-6). Denne blanketten skal også benyttes for tiltak hvor det både er nybygg og rehabilitering/invin, For nybyøg: se bygoblankett 5178 Situtrasport med avfallsplan for nybyøg.

Avfalisplan skal foreligge i tiltaket. Sluttrapport skal vedlegges søknad om ferdigattest. Eventuell justert sluttrapport, inkludert mindre gjenstående mengder, skal oppbevares av ansvarlig søker og skal ikke sendes inn til kommunen (se velledning til SAK § 8-1 fjerde ledd).

#### Waste management plan - check list

- ✓ Has the sorting target been reached?
- ✓ Are all the heavy factions included?
- ✓ Are hazardous waste and EE waste included?
- ✓ Are all the hazardous waste fractions that will occur in included?

14

#### Other sources for waste data

- ✓ Empirical data from own projects (quanity of waste per m2)
- ✓ Figures from Statistics Norway (SSB)
- ✓ The figures from Statistics Norway are also compiled in the guide "waste management on construction sites" <a href="https://www.byggemiljo.no">www.byggemiljo.no</a>

15

## Final waste report

Forms for final report with waste plan:

- √ 5178 Final report with waste plan for new buildings
- √ 5179 Final report with waste plan for rehabilitation and demolition

The forms can be found on the website of the Norwegian Building Authority. As mentioned earlier, a new digital solutions for completing and submitting waste plans is under preparation.

#### Final report and documentation obligation

- ✓ The final report must be attached to the application for a certificate of completion.
- ✓ The final report must document the actual handling of all waste types generated by the project.
- ✓ Documentation includes receipt confirmations from waste treatment facilities.
- ✓ In the case of reuse or recycling of the materials where approved facilities is not involved, it must be documented where and how the waste is disposed of, as well as the quantities involved.

#### Final report and documentation obligation

- ✓ Hazardous waste must be sent to waste facility with permission from the State Administrator.
- ✓ Significant deviations from the waste plan must be explained.
- Serious deviations from the waste plan can lead to an infringement fee (SAK 10, § 16-1) or a compulsory fine (PBL § 32-5).

## The contractors' experiences with waste plans

- ✓ Waste management should be implemented in the contracts between the project owner/builder and the contractor.
- ✓ Waste should be on the agenda for all construction meetings.
- ✓ Need for increased knowledge about sorting on site and hazardous waste in buildings.
- ✓ Good planning and organization is a must to achieve successful waste management.
- ✓ Cooperation and interaction between the contractor and the waste company are vital to succeed in increased degree of source sorting

## Tips for success - administration

#### Planning the waste management:

- Estimates of expected types and quantities of waste
- ✓ Establish a good dialogue with the transporter, waste facility and those who will handle the waste on the construction site.
- ✓ Collect documentation (fractions and quantities of waste received) regularly from the waste facility.

Foto: Guro Kristine Mill

## Tips for success - practical implementation

- ✓ Suitable and sufficient equipment.
- ✓ clear labeling of containers, preferably with pictures and possibly in several languages.
- ✓ Place waste containers for sorting close to where waste is generated.
- ✓ Place the container for general waste at the far end of the row of containers for sorted waste.

#### Task: Waste management plan for new buildings

#### Construction of a detached house on Frogner in Oslo

And inform you to tell you that he is going to build a detached house on Frogner in Oslo, and he needs help completing in the waste plan.

The information you receive:

- ✓ The building site address and Kåre Klok's address are Hovedveien 1, Gnr. 1, Bnr. 1, Festen no. 1, 1234 Oslo. Phone 11 11 11 11. The area is 301 square meters .
- ✓ The main contractor is Villabygg by Kåre Klok. Address Villaveien 1, 4321 Oslo, Tel. 00 00 00.
- ✓ The detached house will be built on site (not modules). The basement consists of cast-in-place
  concrete and the other two floors are built with wooden timbers covered with plasterboard. Table
  cover of pressure-treated wood.
- ✓ Other materials used are "ordinary" when building detached houses today.
- ✓ There is sufficient space on the construction site.
- ✓ The waste must be delivered in the cheapest possible way, but of course in accordance with legislative requirements.

#### Good luck ©

# Example – completed form

| Waste fraction (ordinary waste)   | Quantity (tonnes) |  |
|---|-------------------|--|
| Wood (not creosot- og CCA-impregnated)                                  | 3,9               |  |
| Paper, cardboard  | 0,21              |  |
| Glass   | 0                 |  |
| Iron and other metals   | 0,15              |  |
| Gypsum based materials  | 1,95              |  |
| Plastic   | 0,21              |  |
| Concrete, brick, lightweight clinker etc                                | 0,5               |  |
| Contaminated concrete and bricks (below the limit for hazardous waste)  | 0                 |  |
| WEEE  | 0,03              |  |
| Hazardous waste waste (Paint, glue, varnish, sealants, spray cans, etc) | 0,03              |  |
| Mixed wate/general waste  | 2,1               |  |

# Example summary

| Summary waste      | Calculated quantity |  |  |
|--------------------|---------------------|--|--|
| Sum total waste    | 9,1 tonn            |  |  |
| Sorted waste       | 7 tonn              |  |  |
| Sorting rate       | 77 %                |  |  |
| Waste/area (kg/m2) | 30                  |  |  |
